

Chamamento de Reikiavik sobre a tecnoloxía sen fíos nas escolas

Versión galega da APDR para a PECCEM. Orixinal en <http://www.stralskyddsstiftelsen.se/wp-content/uploads/2017/03/Reykjavik-Appeal-170224-2.pdf>

Nós, os abaixo asinantes, manifestamos a nosa preocupación pola saúde e o desenvolvemento dos nosos nenos/as nas escolas coa aplicación da tecnoloxía sen fío para o ensino. Unha gran cantidade de estudos científicos evidencian considerables riscos médicos debidos á exposición a longo prazo á radiación de radiofrecuencias (RFR) de redes e dispositivos sen fíos; moi por baixo dos niveis de referencia recomendados pola Comisión Internacional de Protección contra as Radiacións Non Ionizantes (ICNIRP). Pedimos ás autoridades que asuman a súa responsabilidade pola saúde e o benestar futuros das nosas e nenos.

En maio de 2011, a Axencia Internacional para a Investigación do Cancro (IARC) da Organización Mundial da Saúde (OMS) clasificou a radiación de radiofrecuencias (RFR) como carcinóxeno do Grupo 2B; é dicir, "posiblemente" carcinóxeno para os seres humanos. Desde entón, máis estudos científicos sobre a exposición a RFR en humanos, animais e material biolóxico han fortalecido a súa asociación a un maior risco de cancro, especialmente de tumores cerebrais. Varios estudos de laboratorio demostraron efectos mecánicos na carcinoxénese como o estrés oxidativo, a regulación á baixa do ARN mensaxeiro e o dano ao ADN con roturas dunha soa cadea. A clasificación de canceríxeno pola IARC inclúe todas as fontes de RFR. A exposición procedente de estacións base de telefonía móvil, puntos de acceso Wi-Fi, teléfonos intelixentes, ordenadores portátiles e tabletas pode ser a longo prazo, ás veces en todo momento, tanto en casa como na escola. Para os nenos/as este risco pódese acentuar debido ao efecto acumulativo do seu uso ao longo do resto da súa vida. Ademais, as células en desenvolvemento e inmaturas poden ser más sensibles á exposición a RFR. Ningún organismo de saúde determinou ningún nivel seguro desta radiación e, polo tanto, non temos garantías de seguridade.

Ademais do risco de cancro, as RFR tamén poden afectar á barreira hematoencefálica facendo que se abra e permita a entrada de moléculas tóxicas no cerebro, danar neuronas do hipocampo (o centro cerebral de memoria), desregular as proteínas do cerebro esenciais para o metabolismo, a resposta ao estrés e a neuroprotección do cerebro e afectar aos neurotransmisores. Observáronse nos espermatozoides expostos ao Wi-Fi más defectos na súa cabeza e danos no seu ADN. As RFR poden incrementar o estrés oxidativo nas células e levar a un aumento das citoquinas¹ pro-inflamatorias e reducir a capacidade para reparar roturas de cadeas de ADN simples ou dobles.

¹ Las citoquinas son un conjunto de proteínas que regulan interacciones de las células del sistema inmune.

Tamén se demostraron deficiencias cognitivas na aprendizaxe e a memoria. Os resultados das enquisas de PISA da OCDE en lectura e matemáticas mostran resultados decrecientes nos países que máis investiron en introducir computadoras na escola. Realizar moitas tarefas simultaneamente, demasiadas horas diante da pantalla, dedicar menos tempo para contactos sociais e actividades físicas, risco de dores de pescozo e costas, sobrepeso, problemas de sono e adicción ás tecnoloxías da información e comunicación (TIC) son algúns dos riscos coñecidos e efectos secundarios das TIC. Todos eles en marcado contraste cos tan proclamados, pero en gran medida non probados, posibles beneficios.

Pedimos ás autoridades escolares de tódolos países que adquiran coñecementos sobre os riscos potenciais das RFR para o crecemento e desenvolvemento dos nenos/as. A promoción de tecnoloxías educativas por cable é unha solución máis segura que a potencialmente perigosa exposición á radiación sen fíos. Pedímoslle que sigan o principio ALARA (tan baixo como razoablemente sexa posible) e a [Resolución 1815 do Consello de Europa](#) para adoptar todas as medidas razoables para reducir a exposición a RFR.

Regras prácticas para as escolas con respecto aos nenos/as e a tecnoloxía sen fíos:

- Non debe haber redes sen fíos en preescolar, gardarías e escolas.
- Recoméndase unha conexión directa por cable en cada aula para uso do profesor durante as clases.
- Dar preferencia a los teléfonos fijos para el personal de preescolar, guarderías y escuelas.
- Primar á conexión por cable a Internet e as impresoras nas escolas e desactivar a configuración Wi-Fi en tódolos equipos.
- Dar preferencia aos ordenadores portátiles e tabletas que se poden conectar por cable a Internet.
- Non se debe permitir que os estudiantes usen teléfonos móviles nas escolas. Poden deixalos en casa ou que o profesor recóllos en modo apagado antes da primeira clase da mañá.

Conferencia Internacional de Reykjavik (Islandia) sobre as nenas e nenos, o tempo de permanencia ante as pantallas e a radiación sen fíos, 24 de febreiro de 2017 (Children, Screen time and Wireless Radiation – International Conference Reykjavik).
